PROFESSIONAL SUMMARY

Creative Programmer and Broadcast Software Developer with 3+ years of experience supporting real-time graphics and data-driven broadcast workflows for live news and election coverage. Hands-on experience with Vizrt, including Viz Engine, Viz Trio and Viz Artist, along with real-time data integration, graphics control applications, APIs, SQL Server, socket communication and broadcast automation. Experienced in live-production troubleshooting, system integration, on-air graphics support and time-critical election coverage. Strong background in C#, .NET, JavaScript and backend systems, with a focus on reliable real-time broadcast operations.

TECHNICAL SKILLS

Real-Time Graphics & Broadcast:	Vizrt, Viz Engine, Viz Trio, Viz Artist, Real-Time Graphics, Broadcast Graphics, On-Air Graphics, Graphics Templates, Data-Driven Graphics, Election Graphics, Live News Graphics, Broadcast Control Systems
Systems & Broadcast Engineering:	Live Production Support, System Integration, System Monitoring, Broadcast Automation, Data Feeds, Real-Time Data Integration, Signal Flow Fundamentals, Production Troubleshooting
Programming & Automation:	C#, VB.NET, .NET, JavaScript, ASP.NET MVC, ASP.NET Web Forms, HTML5, CSS3, REST APIs, Web APIs, Socket Communication
Data & Backend:	SQL Server, MySQL, Entity Framework, Database Design, Data Processing, API Development
Development Tools:	Visual Studio, VS Code, SDLC, Debugging, Troubleshooting, Production Support

PROFESSIONAL EXPERIENCE

ZEE NEWS | ***Creative Programmer / Software Developer*** **May 2023 – Present**

- Own and support real-time graphics systems during live news and election production, ensuring reliable operation and continuity of on-air graphics.
- Develop and support real-time Vizrt broadcast graphics systems and data-driven visualization workflows for live news and election coverage.
- Support Viz Engine, Viz Trio and Viz Artist-based workflows for dynamic on-air graphics, live data presentation, templates and broadcast control.
- Integrate real-time election data, SQL Server databases, APIs and broadcast graphics systems to deliver accurate and timely on-air visualization.
- Provide independent live-production troubleshooting across graphics systems, data feeds, application logic, databases and broadcast integrations.
- Develop custom broadcast control applications using C#, .NET, ASP.NET MVC/Web Forms, JavaScript, HTML and CSS.
- Build real-time data links and automation workflows using REST APIs, database connectivity, socket communication and service interfaces.
- Collaborate directly with newsroom, production, graphics and technical stakeholders during time-critical live operations.
- Participate in system design, integration, testing, deployment, upgrades and production support.

SAKSHI TV | ***Freelance Software Developer - Broadcast Technology*** **Apr 2024 – Jun 2024**

- Developed a real-time election data and visualization application supporting live election management and results workflows.
- Built dynamic dashboards and data-entry interfaces for real-time election results, candidate status, vote counts, and operational monitoring.
- Implemented real-time data processing and UI updates using C#, .NET, JavaScript, HTML, CSS, and SQL-based data systems.
- Designed application workflows for accurate and reliable handling of rapidly changing election data in a live broadcast environment.
- Collaborated with technical and production stakeholders to troubleshoot application, data, and real-time visualization issues during election workflows.

SELECTED PROJECTS

StudioCast Control Panel — Real-Time Broadcast Control & Graphics Integration *C#, ASP.NET MVC, JavaScript, jQuery, SQL Server, Socket Integration*

- Developed a real-time broadcast ticker control application for managing live on-air content and broadcast graphics workflows.
- Built dynamic control interfaces using C#, ASP.NET MVC, JavaScript, and jQuery for real-time content management and operator interaction.
- Implemented backend logic for looped playback, content caching, row-level controls, and real-time execution.
- Integrated the application with external broadcast systems using custom socket-based command communication for real-time control.
- Designed the system to support reliable, low-latency communication between operator controls and live broadcast workflows.

Electra Sync *C#, .NET, JavaScript, HTML/CSS, SQL Server*

- Developed a real-time election data management and visualization platform for live election workflows.
- Implemented dynamic dashboards displaying real-time vote counts, candidate status, and election data.
- Designed data synchronization workflows using SQL Server and .NET to maintain accurate and consistent real-time information.
- Developed interactive operator interfaces for rapid data entry, status updates, monitoring, and live results management.

EDUCATION

BRCM College of Engineering & Technology, Haryana
Bachelor of Engineering, Computer Science and Engineering (GPA: 8.5)

M S R D S College of Science, Hajipur, Bihar
Senior Secondary Science (Maths) (GPA: 7.9)

B D Public School, Hajipur, Bihar
Secondary (High School) (GPA: 8.8)
